**Credo Reference**

Once known as 'X-Refer', *Credo Reference* is a good starting place for basic research. It can be described as a 'scholarly, peer-reviewed Wikipedia'. Offering full-text access to hundreds of reference books and covering a broad range of subjects, *Credo Reference* offers everything from basic definitions to biographical and historical information as well as scientific information.

**Reference**

*Credo Reference* includes atlases, dictionaries, bilingual dictionaries, biographical dictionaries, subject specific dictionaries, general encyclopedias and subject specific encyclopedias. *Credo* includes reference books on chronology, quotations, speeches, statistics, etc. *Credo* also offers an image collection of some of the most famous paintings and pictures from around the world. Some images are copyright protected while others can be used freely.

**Subjects and Languages**

Art, Food and Beverage, Geography, History, Law, Literature, Medicine, Music, Philosophy, Psychology, Religion, Science, Social Science and Technology are some of the topics. *Credo* reference material can be translated from and/or into over 5 different languages including Arabic (Urdu), Chinese (Simplified), French, Polish and Spanish.

**Topic Pages**

For a quick reference guide (or definition) to specific topics such as "Communism" or simply "Egypt", type the word in the basic search blank and if a *Credo* Topic Page exists for the subject search, the first citation in the Results List will be a Topic Page. The Topic Page gives basic information about the topic such as a definition, an overview, links to books, images and journal articles related to the topic, links to related entries, and links to recently-visited related topics.

**Gadgets**

Gadgets are quick reference, interactive tools that can be used to define words, find biographical information, quotations, pronunciations, holidays and festivals, etc. Also under the *Credo* Gadgets tab is a conversion table that converts measurements including area, distance, energy, fuel consumption, temperature, power, speed, volume and weight.

**Concept Maps**

*Credo’s* java enabled Concept Map keeps the eye busy with interactivity and allows the user to expand his or her knowledge on any given topic. Once the search has been done, move the screen cursor over the map and watch the pop-ups (each one giving the user a bit more information about the topic).

*Credo Reference*, a scholarly Wikipedia (not a free Internet source) is a quality source to begin research for a topic.
